Flow of Funds Summary Statistics

Fourth Quarter 1999

Domestic nonfinancial debt grew at a 6-1/2 percent annual rate in the fourth quarter of 1999. The pace of borrowing by households and businesses continued strong, and the paydown of federal government debt slowed in the fourth quarter as the Treasury sought to build its cash holdings as a precaution against potential disruptions at the turn of the century. On balance for the year, federal debt held by the public contracted 2 percent and on a not-seasonally-adjusted basis was down about \$150 billion at year end, or roughly 4 percent from its peak in early 1998. Household and business sector debt expanded 9-1/2 percent and 10-1/2 percent respectively in 1999.

In the fourth quarter, household debt rose at an 8-1/2 percent pace, accounted for by large increases in both home mortgage debt and consumer credit. Business debt expanded at a 9-1/2 percent annual rate

in the fourth quarter. Bond issuance by nonfinancial firms declined from the rapid pace earlier in the year, but borrowing from banks picked up a bit. Growth of state and local government debt slowed to a 2-1/2 percent rate in the fourth quarter; for the year as a whole, state and local government debt increased about 4-1/2 percent.

The level of domestic nonfinancial debt outstanding was \$17.4 trillion at the end of the fourth quarter of 1999. Debt of nonfederal sectors was \$13.7 trillion, and federal debt was \$3.7 trillion.

Figures for the growth and level of debt are found in tables D.1 through D.3. Tables that show financial flows, amounts outstanding, and selected sector balance sheets are included in the remaining pages of this release.

Flow of Funds Accounts, Fourth Quarter 1999

This publication presents the flow of funds accounts for 1999:Q4.

Data revisions and other changes. The statistics shown in these tables reflect the use of new or revised source data. Most significant revisions appear in recent quarters; however, new source information resulted in changes to data for earlier periods. The revisions include the following:

1. Multifamily and commercial mortgage lending and outstandings of issuers of asset-backed securities (tables F.126 and L.126) have been revised from 1985:Q2 forward to reflect more complete information on the value of commercial-mortgage-backed securities (CMBS) outstanding.
2. Undistributed corporate profits of financial sectors, which are a component of sector gross saving, (tables F.108 through F.130) have been revised from 1959:Q1 forward. Revisions prior to 1959 in the national income and product accounts have not yet been made available by the Department of Commerce.

Explanatory notes for tables D.1, D.2, and D.3. Domestic debt comprises credit market funds borrowed by U.S. entities from both domestic and foreign sources, while foreign debt represents amounts borrowed by foreign financial and nonfinancial entities in U.S. markets only. Financial sectors consist of government-sponsored enterprises, federally related mortgage pools, and private financial institutions. Credit market debt consists of debt securities, mortgages, bank loans, commercial paper, consumer credit, U.S. government loans, and other loans and advances; it excludes trade debt, loans for the purpose of carrying securities, and funds raised from equity sources.

Growth rates in table D.1 are calculated by dividing seasonally adjusted flows from table D.2 by seasonally adjusted levels at the end of the previous period from table D.3. Seasonally adjusted levels in flow of funds statistics are derived by carrying forward year-end levels by seasonally adjusted flows. Growth rates calculated from changes in unadjusted levels

printed in table L.2 can differ from those in table D.1.

Relation of Flows to Outstandings. Estimates of financial assets and liabilities outstanding are linked to data on flows. However, figures on outstandings contain discontinuities or breaks in series that could affect analysis of particular relationships over time. Specifically, outstandings in the flow of funds accounts are related to the flows in the following way:

$$\text{Outstanding}_t = \text{Outstanding}_{t-1} + \text{Flow}_t + \text{Discontinuity}_t$$

where "t" is the time period.

Discontinuities result from changes in valuation, breaks in source data, and changes in definitions. For most series, the value of the discontinuity is zero for nearly all time periods. However, in a few instances, the discontinuity is nonzero for almost all time periods, or is quite large in a particular quarter, such as a period when there is a sharp increase or decrease in equity prices or a major break in source data.

The discontinuities in a series can distort estimated rates of growth in assets and liabilities between periods. In order to minimize these distortions, percentage changes in assets and liabilities in flow of funds releases should be calculated in the following manner:

$$\text{Percentage change}_t = (\text{Flow}_t / \text{Outstanding}_{t-1}) * 100$$

Preliminary Estimates. Figures shown for the most recent quarter in these tables are based on preliminary and incomplete information. A summary list of the principal sources of information available when the latest quarter's data were compiled is provided in a table following this introduction. The distinction between "available" data and "missing" data is not between final and preliminary versions of data, but rather between those source estimates that are fully ready when the latest quarterly publication is compiled and those that are not yet completed. However, the items that are shown as available are, in general, also preliminary in the sense that they are subject to revision by source agencies.

Margins of Uncertainty. Flow of funds statistics are subject to uncertainties resulting from measurement errors in source data, incompatibilities among data from different sources, potential revisions in both financial and nonfinancial series, and incomplete data in parts of the accounts. The size of these uncertainties cannot be quantified in precise statistical terms, but allowance for them is explicitly made throughout the accounts by the inclusion of "discrepancies" for various sectors and instrument types. A discrepancy for a sector is the difference between its measured sources of funds and its measured uses of funds. For an instrument category, a discrepancy is the difference between measured funds borrowed through the financial instrument and measured funds lent through that instrument. The size of such discrepancies relative to the main asset or liability components is one indication of the quality of source data, especially on an annual basis. For quarterly data, differences in seasonal adjustment procedures for financial and nonfinancial components of the accounts sometimes result in discrepancies that cancel in annual data.

Availability of Data. Flow of funds statistics are updated about ten weeks following the end of a quarter. This publication—the Z.1 release—is available from the Board's Publications Services. Flow of funds data are also available electronically through the Internet at the following location:

<http://www.federalreserve.gov/releases/Z1>

The Internet site also provides quarterly data beginning in 1952, organized in compressed files that correspond to the tables published in this release. There are separate files for seasonally adjusted flows, unadjusted flows, quarterly outstandings, balance sheets, quarterly debt (tables D.1, D.2, and D.3), and monthly data from January 1955 onward for the debt aggregate published in the Board's H.6 statistical release, "Money Stock and Debt Measures."

General notes: A = assets; L = liabilities. Domestic nonfinancial sectors (columns 9 and 10) are households and nonprofit organizations, nonfinancial business, state and local governments, and federal government. Equity included in line 2 is the sum of corporate equities (line 25) and equity in noncorporate business (line 33). The matrix shows a discrepancy in column 17 for monetary gold and SDRs (line 4) because by international accounting convention, such instruments are financial assets without corresponding liabilities.

(1) Estimates of equity shares (lines 7 through 12) could differ from other sources owing to alternative definitions of ownership of equity by households.

In this table, line 11 includes equities in defined contribution plans only; assets in defined benefit plans are included in 'other assets' (line 13).

Prior to 1985, all pension assets are assumed to have been in defined benefit plans.
